

ARJUN BHARADWAJ RAVEENDRAN

SOFTWARE ENGINEER | Canadian citizen

Vancouver, BC | +1 (647) 809-6467 | arjun01raveendran@gmail.com | [Linkedin](#)

Software engineer building full-stack products, backend automation and enterprise AI tooling. Experience delivering production CRM features, evidence-driven data systems and privacy-aware agent observability.

EXPERIENCE

BrickRed Systems

May 2026 - Present

Software Engineer Intern | Vancouver, Canada

Corelift | Enterprise AI tooling | Client: Microsoft

- Built a Node.js / Model Context Protocol (MCP) telemetry service with strict session-schema validation, tenant resolution from bearer tokens, and structured event delivery to Azure Application Insights.
- Configured an OpenTelemetry pipeline with filtering, normalisation, HMAC pseudonymisation and allowlists to remove sensitive data locally before export; added Azure monitoring and KQL reporting.
- Extended SAP test-agent tooling with an ABAP Test Cockpit runner over the ADT REST API; corrected an ABAP Unit quality gate that reported passing results for failed tests.
- Packaged automated HTML test reports as a GitHub Copilot skill and validated the agent against a live SAP application on BTP; restored Playwright video evidence for Fiori workflows.

X1 Analytics | Public-records automation

- Built a Python / Playwright engine that assembles property title reports from public county sources, linking parcel, deed and court records through an evidence layer with traceable source links.
- Reduced per-parcel runtime from 25-42 minutes to 1-3 minutes through parallel browser contexts and targeted searches; the project advanced from proof of concept to a client pilot.
- Implemented an offline verification scorer and regression acceptance gates; identified incorrectly linked parcels and verified records missing from vendor reports.
- Designed session-aware crawling with persisted sessions, request pacing, cross-tool locking and stops on access challenges or rate limits to address failures caused by session bursts.

CXOwork

May 2026 - Aug 2026

Executive Team Member | Seattle, USA

Production CRM development, in partnership with BrickRed Systems

- Shipped production CRM features in React, TypeScript and Firebase across development, beta and production environments.
- Built CSV, LinkedIn and Google Contacts import pipelines with cross-source deduplication, plus Gmail send/inbox sync using OAuth 2.0 behind a provider layer extensible to Microsoft 365.
- Automated core user journeys with Playwright and delivered engineering handoff documentation for the team.
- Developed Python / Selenium lead-generation crawlers, a resume-shortlisting engine and a Node.js CLI for batch account provisioning.

ARJUN BHARADWAJ RAVEENDRAN

EXPERIENCE CONTINUED

EzeePay India

Feb 2019 - Jun 2019

Software Testing Intern | India

- Automated previously manual regression scenarios with Selenium WebDriver across payment-processing workflows.
- Contributed to test planning, functional and regression execution, defect tracking and release validation in an Agile fintech team.

SELECTED PROJECTS

Credit Card Fraud Detection

Python, XGBoost, LightGBM, FastAPI, AWS Lambda

- Built a fraud-classification pipeline for highly imbalanced transaction data using a soft-voting XGBoost and LightGBM ensemble.
- Evaluated classification performance using F1 and ROC-AUC; built a FastAPI inference endpoint designed for AWS Lambda.

DeveloperWeek Marketplace

React, Node.js, PostgreSQL | Hackathon, 2025

- Delivered a reselling-marketplace MVP in a small team, implementing frontend and backend features with React, Node.js and PostgreSQL.
- Designed the database schema and integrated payments and OAuth authentication.

Hack-and-Slash Action Game

Unreal Engine 5, Blueprints, Behaviour Trees | Independent project, 2026

- Built combo-based melee combat with hit detection and damage driven by animation notifies; implemented locomotion and Animation Blueprints.
- Developed enemy perception and spawning with Behaviour Trees, plus player progression, HUD, menus and a persistent save system.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Full-stack & APIs: React, Node.js, Express, FastAPI, PostgreSQL, Firebase, REST, OAuth 2.0

AI tooling & observability: MCP, GitHub Copilot, OpenTelemetry, Azure Application Insights, KQL

Automation & delivery: Playwright, Selenium, AWS, Docker, Git

Machine learning: Scikit-learn, XGBoost, LightGBM, Pandas

EDUCATION

University of Guelph

2025

Bachelor of Computing, Computer Science
